SEAYER

By Carl Saucier,
CIAQ Progeny Analyst

SEAYER STANDS #1 AMONG ALL 104 GOLDWYN SONS TESTED AND MARKETED AT SEMEX

It is very special because 5 years ago as progeny analysts we were busy inspecting and looking at the best daughters of those very first Goldwyn sons for potential pictures. It really seem like yesterday...Fever, Jordan, Seayer, Lauthority, Reginald, etc... were starting to calve all over Quebec! Today, I made a quick analysis of all the Goldwyn sons proven with thousand and thousand daughters milking in Canada that we market at Semex. The numbers are revealing that Seayer really stands out as number one in ten different categories among all the Goldwyn sons with second crop daughters and marketed at Semex.

Number one for Conformation at +16

Number one for Mammary System at +14 ... even with Reginald

Number one for Dairy Strength at +13 ... even with Lauthority

Number one for Fore Attachment at +12

Number one for Rear Attachment Height at +14

Number one for Combine Rear Attachment Height and Width at +26

Number one for Height of Front End at +12

Number one for Chest Width at +14

Number one for Pin Setting at +8

Along with all of the above, he is The Number One for Somatic Cell Score at 2.52

And he is Immunity +!

Seayer graduated in August 2010 and had a final score for Conformation at +17 and even today with the effect of five roll back adjustments in type he still is +16!

Today with more than 3000 daughters in is type proof Seayer have proven that he is among the top type improvers in the world!

After saying all this, the Seayer daughters are among the best cows in the barns. They excel by their quality of mammary system, tremendous udder attachment with a great amount of veination all over which make them very attractive. Their outstanding dairy strength and correct feet and legs are qualities that make me believe they will excel in any kind of environment and will prove to be the profitable, long-lasting cows.
