Sire Discussion Sheets

First Proven Goldwyn Son Many of Goldwyn Many		
Holstein breed. As the first Goldwyn son, Aurora will offer customers the first proven opportunity to benefit from Goldwyn's influence and will be extremely popular worldwide  Conformation  Many of Goldwyn's traits come through in Aurora siring a good conformation rating on his first proof. Aurora daughters have much of the same eye-catching traits being appealing at very first glance, making these daughters some of the best ones for type in their herots  Udder Texture  As off udder quality allows for their udders to be healthier and milk out easily, decreasing the incidence of mastitis. A softer udder will decrease udder health issues and related expenses for the dairyman. A softer udder is also generally able to handle increased production more easily as the cow matures through each lactation.  Width and Strength  These cows are stronger than expected, displaying excellent amounts of width and strength to them, keeping strong and aggressive throughout their factation. This width is something that as they age and develop will be transmitted back through their frame and mammary system. Aurora's udders show the same great width that we see in the front ends of these cows. This width will give added strength to the attachment allowing the mammary system to last for many lactations of successful milk production.  Fore Udder  Eike his sire, Aurora transmits ideal fore udder strength. The fore udder is very long and well-attached, and is strongly attached to the body wall. The velnation and quality add to the appearance and desirability of the fore udder, resulting in fore udders that will stand the test of time and last for many lactations  Flat Soned and Aurora's legs are refined and flat while his foot shows above average depth to them. These are two traits that will obtain the control of the surface of the producers and the late of the producers and the producers will be their positive fat and protein deviations. He is a built that is able to transmit good fat and protein levels and improve the producers.  Excel	<b>Discussion Point</b>	Benefit To The Customer
daughters have much of the same eye-catching traits being appealing at very first glance, making these daughters some of the best ones for type in their herds  Udder Texture  A soft udder quality allows for their udders to be healthier and milk out easily, decreasing the incidence of mastitis. A softer udder will decrease udder health issues and related expenses for the dairyman. A softer udder is also generally able to handle increased production more easily as the cow matures through each lactation.  Width and Strength  These cows are stronger than expected, displaying excellent amounts of width and strength to them, keeping strong and aggressive throughout their lactation. This width is something that as they age and develop will be transmitted back through their frame and mammary system  Rear Udders  Rear udder strength is crucial for the longevily of the mammary system. Aurora's udders show the same great width that we see in the front ends of these cows. This width will give added strength to the attachment allowing the mammary system to last for many lactations of successful milk production  Fore Udder  Like his sire, Aurora transmits ideal fore udder strength. The fore udder is very long and well-attached, and is strongly attached to the body wall. The vientation and quality add to the appearance and desirability of the fore udder, resulting in fore udders that will stand the test of time and last for many lactations  Flat Boned and  Aurora's legs are refined and flat while his foot shows above average depth to them. These are two traits that will combine for a healthy producing animal that is able to live stress free lactation after lactation. A deep heel will keep the cow healthler in her feet, while the refined bone tells us they have the ability to produce  Positive Fat and  Protein Deviations  Aurora's daughters are good producing individuals, but their greatest strength within their production will be their positive fat and protein deviations. He is a bull that is able to transmit good fat and pro		Holstein breed. As the first Goldwyn son, Aurora will offer customers the first proven opportunity to benefit from
mastitis. A softer udder will decrease udder health issues and related expenses for the dairyman. A softer udder is also generally able to handle increased production more easily as the cow matures through each lactation  Width and Strength  These cows are stronger than expected, displaying excellent amounts of width and strength to them, keeping strong and aggressive throughout their lactation. This width is something that as they age and develop will be transmitted back through their frame and mammany system. Aurora's udders show the same great with that we see in the front ends of these cows. This width will give added strength to the attachment allowing the mammany system to last for many lactations of successful milk production  Fore Udder  Like his sire, Aurora transmits ideal fore udder strength. The fore udder is very long and well-attached, and is strongly attached to the body wall. The veination and quality add to the appearance and desirability of the fore udder, resulting in fore udders that will stand the test of time and last for many lactations  Flat Boned and  Aurora's legs are refined and flat while his foot shows above average depth to them. These are two traits that will combine for a healthy producing animal that is able to live stress free lactation after lactation. A deep heel will keep the cow healthier in her feet, while the refined bone tells us they have the ability to produce  Positive Fat and  Protein Deviations  First groups and autora's daughters are good producing individuals, but their greatest strength within their production will be their positive fat and protein devalations. He is a bull that is able to transmit good fat and protein levels and improve the percentage of milk solids. This is a valuable trait for many producers  Excellent Health  Siring low SCS, good Calving Ability and positive Herd Life, Aurora is not just another good type sire, he is very complete. This health trait breakdown is essential in today's market to help improve herd efficiencies and profitability.
